

CLEANING AND MAINTENANCE

of surfaces finished with Treatex Hardwax Oil

treatex[®]

Whilst Treatex Hardwax Oil is an exceptionally durable finish the key to keeping your wooden surface looking good is a regular cleaning and maintenance program. We have developed a range of products which are designed to easily look after wooden surfaces. Other brands of cleaning products may contain ingredients that could damage your surface.

Surface cleaning

It is very important to keep wooden surfaces clean. Dust, dirt and grit should be regularly removed using a damp cloth, microfibre mop or a vacuum

cleaner with a soft attachment. If allowed to build up dust, dirt or grit can act like sandpaper, scratching and dulling your finish. If your surface looks dull clean using Treatex Spray On Floor & Surface Cleaner.

It seems in recent years being busy has become the rule rather than the exception. We struggle to balance kids, work, friends, family, and then we have to worry about finding time to clean our wooden surfaces! Spray On Floor & Surface Cleaner is a convenient ready diluted spray, which is designed to quickly clean and maintain surfaces treated with Treatex Hardwax Oil. This PH neutral products contain vegetable oils and carnauba wax, which means that as your surface is cleaned a thin replenishing and protective layer of wax is also applied. Simply spray surface lightly with Spray On Floor & Surface Cleaner and wipe with a cloth or mop.

Treatex Wood Floor Cleaning Kit

Spray On Floor & Surface Cleaner is included in our Wood Floor Cleaning Kit alongside a microfibre mop. If you have never used a microfibre mop, then you will be amazed at how easy they are to use. This advanced material consists of thousands of microscopic fibres which effortlessly glide across wooden floors, actively lifting up dirt and grime.

Surface maintenance

Worn surfaces can be easily renovated using Treatex Preparation Cleaner and Treatex Wax Polish. Preparation Cleaner is an aggressive cleaner which removes contaminants such as dirt, grease and fat leaving wood ready for refreshing with Wax Polish. Preparation Cleaner removes a small amount of wax, so do not use it for regular cleaning. Wax Polish is an easy to apply clear polish designed to refresh worn wooden surfaces finished with Treatex Hardwax Oil. This product is manufactured on the same base of natural sustainable raw materials as our Hardwax Oil: linseed oil, sunflower oil, jojoba oil, beeswax, carnauba wax and candelilla wax. Wax Polish forms a durable, water repellent and non slip finish. Wax Polish can be wiped on using a lint free cloth or buffed on using a slow machine with a white pad.

Tips

To safeguard floors we recommend all furniture be fitted with felt pads. Similarly, any objects you place on worktops such as chopping boards, containers, flower and tea pots may have rough and abrasive bases, stick small rubber or felt pads to these to avoid scratching. Mop up spills of water and other liquids as soon as possible. When using a mop ensure that the mop is only ever slightly damp and never dripping with water. Do not use bleach or aggressive cleaners on wood. Never use a steam cleaner on your surface. Use a chopping board for food preparation – do not chop directly onto wooden worktops. Protect floors by using a good quality doormat to trap abrasive particles at the door.

Flooring in commercial locations

Floors in high traffic commercial locations may need a specialised cleaning and maintenance program. We can work with you and put together a cleaning and maintenance program to keep your floor looking good. Please contact us for help.
